Morphological Plasticity in Wood Frogs and Green Frogs as Indicators of Eutrophication Levels

Presented by:
Idris Isaiah Irihamye

Mentors:
Dr. Cy Mott
Sandra Elliott
Brady Parlato
Aaron Devine

Brady Parlato. Thesis Proposal. Figure 1.

Non-Lethal effects:
Behavioral, Physiological,
Morphological

Eutrophication

Initiated by excess nutrients

Stage 1: Bottom-up control

Stage 2: Alterations in trophic interactions

Results in trophic cascades

Morphological Plasticity

Characteristics:

Tail Length

Tail Muscle Height

Tail Width

Head Height

Total Length

Tail Width

Head Width

Interocular Distance

Tail Depth

- (Length/Height)

Objectives

01

Understand and replicate indicators of varying predator-prey relationships in Wood Frogs and Green Frogs

02

Relate the prevalence of these indicators to eutrophication levels

Fertilizer Treatment

Fertilizer Treatment

RFU vs. Treatment Primary productivity measurement

Fertilizer Treatment

Characteristics:

- Tail Length
- Tail Muscle Height
- Tail Width
- Head Height
- Total Length
- Tail Width
- Head Width
- Interocular Distance
- Tail Depth
- (Length/Height)

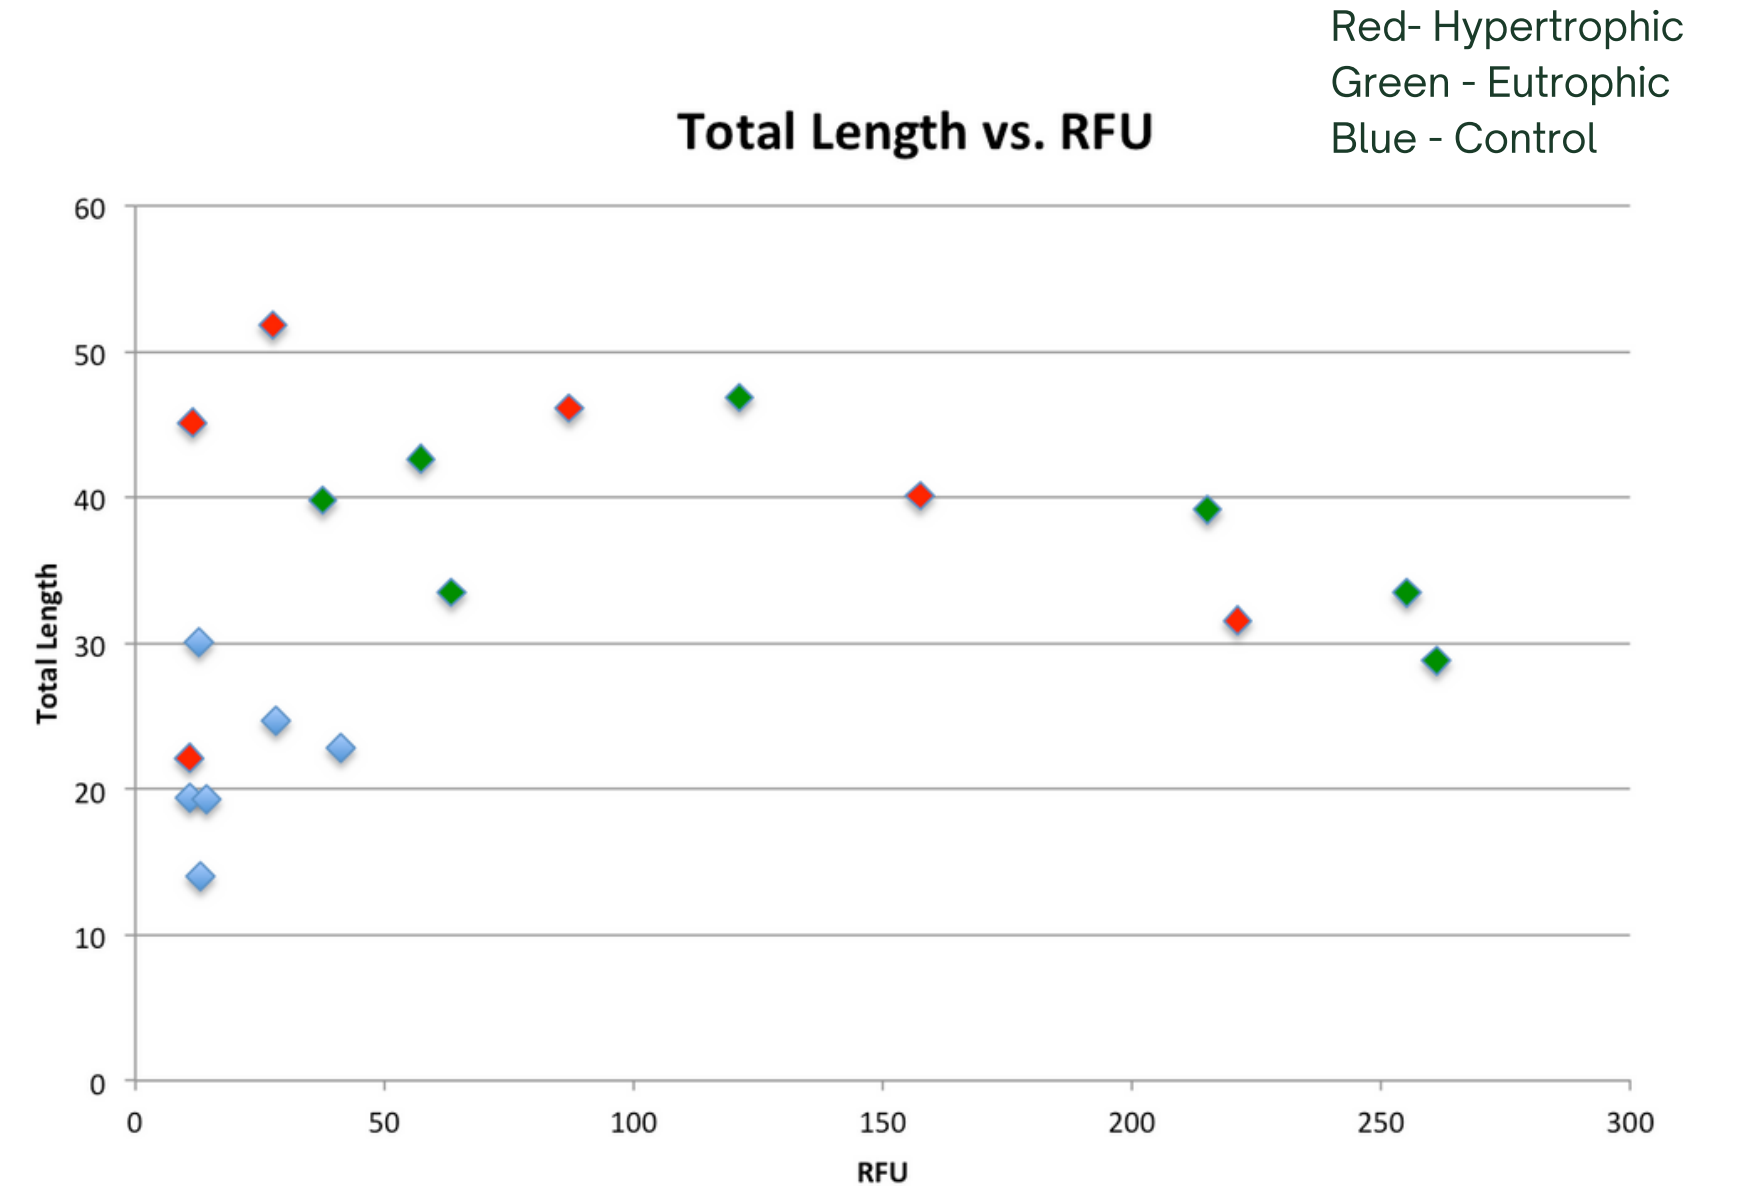

Expected Relationship with Environmental Data

TTL vs. Treatment

Similar to other morphological characteristics

Total Length vs. RFU

Conclusions

Environmental Variation

Increased UV exposure -> Increase in temperature
Intermediate fertilization -> Increase in primary productivity (RFU)

Impact on Morphology

Increase in temperature -> Increase in tadpole size & tail fin depth
Increase in temperature -> More rapid development
Increase in PP -> Increase in tadpole size & tail fin depth
- not correlated to post-treatment nutrient levels

Indicative of Eutrophication

Possibly induced a phytoplankton crash
Possible that nutrients were used by system before sampling
Could be indicative of increased predation or food availability

- Measure tadpoles from all tanks
- Analyze nutrient levels, primary productivity, & macroinvertebrates from time frames before and after tadpole sampling
- Use water with a previously set nitrate concentration
- More precise pre-treatment tadpole selection

Future Steps

Cope's Gray Treefrog
- intended fertilizer treatment study species
